10HW-Query terms

- **Single Web App:** A single, standalone web application that functions independently. It is accessed via a browser and provides a smooth experience without needing multiple pages or apps. These apps are easier to maintain and update since all code is centralized.
- **Multiple Web Applications:** Refers to several independent web applications that work together to provide a complete solution. Each app serves a specific function and may interact with each other but are typically separate in terms of implementation and access.
- **Animated Web Applications:** Web applications that incorporate interactive animations to enhance the user experience. They use technologies like CSS, JavaScript, and frameworks like React or Vue.js to create visual transitions, dynamic effects, and interactive content.
- **E-commerce:** Online platforms designed for buying and selling products or services. They include features like shopping carts, secure payment methods, and product catalogs. They are optimized for conducting transactions efficiently and securely.
- **Portals:** Websites that centralize and aggregate resources, services, or information provided to specific users (employees, customers, students, etc.).
- **Progressive Web Applications (PWA):** Web apps that offer a native-like experience, with the ability to work offline, push notifications, and optimized performance.
